FINAL RESTORATION

Overview

01. DIAGNOSIS & TREATMENT PLAN

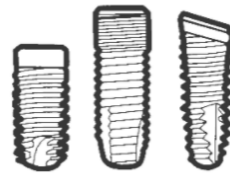

Success starts with an eye on the outcome.

02. AUGMENTATION

Reduce complexity. Optimize predictability.

03. IMPLANT TREATMENT

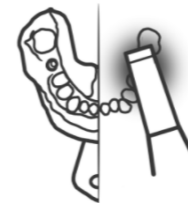

Strengthen what's critical. Redefine what's necessary.

04. HEALING & PROVISIONALIZATION

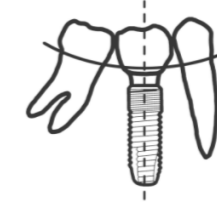

A streamlined procedure for a trusted transition.

05. FINAL IMPRESSIONS

First time precision with no second guessing.

06. FINAL RESTORATION

Get more strength with less excess.

06. MAINTENANCE

Post procedural maintenance

Conventional and digital workflows designed for efficiency, long-lasting outcomes and practice success.

Dentsply Sirona offers a single-tooth replacement workflow that improves your efficiency, profitability and patient experience.

51%

of patients accept implant treatment - a lower than necessary percentage caused by patient fear and treatment cost

26%

over of implant treatment steps are not revenue producing or non-billable

70%

overhead cost must be lower than 70% for implant procedures to be profitable

How the user triggers and utilizes the
hamburger menu:operate menu:

Step 1: The user clicks on hamburger menu.

Step 2: The hamburger menu opens to reveal
to show links of menu items, including
overview, product Index, resources, etc.

Step 3: Both product Index and resources
will populate additional options to the right
of the main categories revealing the all options

Step 4: Clicking on sub-categories will navigate
users to pertinent pages and close navigation.

Maintenance

06. FINAL RESTORATION: MULTIPLE TEETH

Get more strength with less excess.

MITIGATE LONGEVITY RISK FACTORS.

Create restorations that reduce the risks of biomechanical complications that impact long-term durability.

PASSIVE FIT.

Create restorations that fit passively even on multiple-unit or fully edentulous cases. Precision in impression taking and prosthesis

OPTIMIZE STRENGTH.

Focus on minimizing stability loss, chipping and screw loosening for more robust long-term results.

MINIMIZE EXCESS.

Solutions that offer simple cement clean-up or no cement at all mean less time spent on non-billable visits and patient complaints.

Jump to: [Insights](#) [Challenges](#) [Solutions](#)

INSIGHTS

29%

of treatment steps for a single-unit implant are not revenue producing.³

Additional screw-fastening visits are a major source of lost profitability and patient dissatisfaction.³

81%

of peri-implant diseases is associated with excess subgingival dental cement.¹⁹

Cement is more difficult to remove when margins are subgingival or do not follow the tooth contour.⁸

CHALLENGES

ADDRESS MECHANICAL ISSUES.

Poor abutment and crown contour design and screw loosening problems mean additional patient visits.

OVERCOME BIOLOGICAL HURDLES.

Ineffective cement cleanup can lead to peri-implant disease and additional complications.

AVOID UNPROFITABLE VISITS.

Any visit for maintenance on a restoration risks overall profitability.

SOLUTIONS

FIXED RESTORATIONS

Partial or fully edentulous patient-specific restorations fit passively and are manufactured precisely for aesthetics, function and longevity.

REMOVABLE RESTORATIONS

Fully edentulous cases can be restored with minimal solutions –patient-specific or not – for maximum hygiene and comfort.

ATLANTIS® BRIDGE

[← Previous](#)[Next →](#)

When function and aesthetics are prioritized.

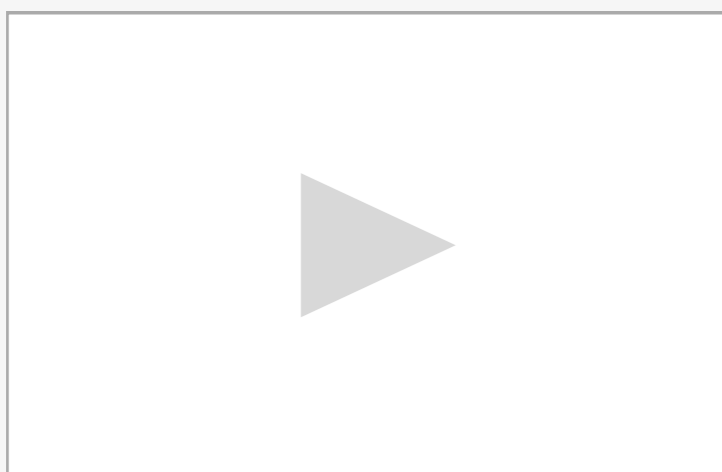

- Full-anatomical base for ceramic layering or composite layering techniques
- Produced by a metal 3D printing technique, additive manufacturing, which provides unique possibilities for advanced geometries. The result is an ultimate design of the suprastructures in titanium and cobalt-chrome, for all major implant systems.
- Screw-retain solution avoids excess cement and its complications
- Passive Fit
- Ask your lab for the Atlantis warranty
